Subject: Microsoft Settlement

The settlement is, in itself, a reward for Microsoft's anti competitive activities. I hope the court holds Microsoft to a trial to hear the evidence of Damages. The company is unbelievable, as the evidence showed during the trial. If the company can not be broken up it should be punished so severely, based upon it's assets, that no other company will consider doing the same as Microsoft in its aggressive anti competitive actions.

This is just my opinion based upon the many pages of material I read about the trial and my own thoughts as to why some programs like WordPerfect were caused problems by the Operating System while "Word" was not.
